ELECTRONIC

**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

pto.phil@dlapiper.com

<b>Office Action Summary</b>	<b>Application No.</b> 10/533,006	<b>Applicant(s)</b> MORIYAMA ET AL.	
	<b>Examiner</b> GREGORY LISTVOYB	<b>Art Unit</b> 1765	

**-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --**

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 28 December 2010.
- 2a) ☒ This action is **FINAL**.                      2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### Disposition of Claims

- 4) ☒ Claim(s) 1, 10-22, 38-46 and 56 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1, 10-22, 38-46 and 56 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

### Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All    b) ☐ Some \*    c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 10-14, 17-18, 20-22 and new claim 56 rejected under 35 U.S.C. 102(b) as being anticipated by Handa et al (WO 01/68340, cited with equivalent US Patent 6589663), herein Handa or Tsukuda et al (US Patent 6274220), herein Tsukuda.

Handa discloses the following polyamide structure, used in LCD displays (thus, meeting the limitations of claim 56), which meets the limitations of Claims 1 (see Column 3, line 65):

Where Ar 1-Ar3 are:

Art Unit: 1765

where X and Y can be SO<sub>2</sub>

Regarding Claims 10-14, 17-18, 20-21 Handa discloses an aromatic polyamide film, structure of which meets the limitations of Claim 6 and 9, having Young modulus within 6000 -40000 N/mm<sup>2</sup> (6 -40 Gpa) (Column 21, Claim 5), thickness of 4-6 microns (Column 21, Table 3) and surface roughness (light retardation), within 0.5-25 (Column 21, Claim 4).

Regarding Claims 20 and 21 Handa discloses the birefringence values for a biaxially oriented film. He expresses birefringence as a Plane orientation coefficient equal to average of birefringence in Machine and Tangential directions (MD and TD). (Column 13, line 30). Planar orientation coefficient varies from 0.11 to 0.6 (Table 3 and Claim 4, Column 21). In examiner's opinion, birefringence in both directions is not equal, since the film is oriented unequally in MD and TD directions. Therefore, for Comparative example 4 (Table 3), which has a planar orientation coefficient of 0.11 birefringence in TD direction is less than 0.1. Therefore, limitations of Claims 20 and 21 are met.

Tsukuda teaches copolyamides with structure identical to one claimed in Claim 1 (see Column 6, line 20) with Young Modulus of 9.8 GPa and above (Column 4, line 20), having structures, meeting the limitations of Claims 7 and 9 (Columns 8 and 9, Example 1).

Since the above structure identical to one in the Application's Specification, it inherently meets the requirements on Light transmittance, Young Modulus and thermal shrinkage of Claims 10, 12- 14, 20-22.

Regarding new limitation of claim 1 claiming Tg of 300C or higher, since Handa's polymer has the same structure as one claimed, their physical properties are inherently identical.

The claiming of a new use, new function or unknown property, which is inherently present in the prior art, does not necessarily make the claim patentable. In re Best, 562 F.2d 1252, 1254, 195 USPQ 430, 433 (CCPA 1977).

Claims 1, 10-14, 20-22 rejected under 35 U.S.C. 102(b) as being anticipated by Teramoto et al (US 4833214) or Tsukuda et al (JP 07-149892) herein Tsukuda 1.

Teramoto teaches a polyamide, comprising 9,9 bis(4-aminophenyl) fluorene and terephthalic acid (see Abstract and Table 1), which corresponds with Structure 1 of the Application examined.

Tsukuda 1 teaches the polyamide copolymer with structure, which meets the limitations of Claim 1, Structure (1)

Since the above structure identical to one in the Application's Specification, it inherently meets the requirements on Light transmittance, Young Modulus and thermal shrinkage of Claims 2,10, 12- 14, 20-22.

Regarding new limitation of claim 1 claiming Tg of 300C or higher, Teramoto discloses Tg of 380, 320 and 330C (see Table 1).

Claims 1, 4-5, 7-22, 38-39, 41, 42 and new claim 56 rejected under 35 U.S.C. 102(b) as being anticipated by Harris et al (US Patent 5580950), herein Harris.

Harris discloses a polyamide, applied as an optical member in LCD displays ((thus, meeting the limitations of claim 56). The structural formula (I) (Column 5), meet the limitations of Claims 1. Note that than r, p and q are not equal to 1, the structure of Harris's Formula (1) meets the limitations of Claim 1.

In addition, polymer disclosed in Example 1 meets the limitation of Claim 1, structure 2, since Harris uses the same monomer (2,2'bis trifluoromethyl, 4,4-diaminophenyl used in the Application examined.

Since the above structure identical to one in the Application's Specification, it inherently meet the requirements on Light transmittance, Young Modulus and thermal shrinkage of Claims 10, 12- 14, 20-22, 36,38-39.

Since the above structure identical to one in the Application's Specification, it inherently meets the requirements on Light transmittance, Young Modulus and thermal shrinkage of Claims 10, 12- 14, 20-22, 36, 38-39

Regarding new limitation of claim 1 claiming Tg of 300C or higher, since Harris's polymer has the same structure as one claimed, their physical properties are inherently identical.

The claiming of a new use, new function or unknown property, which is inherently present in the prior art, does not necessarily make the claim patentable. In re Best, 562 F.2d 1252, 1254, 195 USPQ 430, 433 (CCPA 1977).

Claims 1, 10-15, 22, 38-39 and new claim 56 rejected under 35 U.S.C. 102(b) as being anticipated by Murakami et al (US Patent 7054049), herein Murakami.

Art Unit: 1765

Murakami teaches a transparent optical film for LCD display that has excellent optical characteristics for realizing the uniform retardation distribution (Abstract).

Murakami discloses a polyamide structure, which meets the limitations of Claims 1, 22 (Column 13, Formula 22).

Note that than  $r$ ,  $p$  and  $q$  are not equal to 1, the structure of Murakami 's Formula (22) meets the limitations of Claim 1.

Most preferable film thickness is within the range of 5 to 150 microns (Column 20, line 50), meeting the limitations of Claims 11 and 24.

The retardation value of the film is within the range -90 nm to 75 nm, meeting the limitations of Claims 17-18.

Since the above structure identical to one in the Application's Specification, it inherently meets the requirements on Light transmittance, Young Modulus and thermal shrinkage of Claims 10, 12- 14, 22, 38- 39.

Regarding new limitation of claim 1 claiming  $T_g$  of 300C or higher, since Murakami's polymer has the same structure as one claimed, their physical properties are inherently identical.

Art Unit: 1765

The claiming of a new use, new function or unknown property, which is inherently present in the prior art, does not necessarily make the claim patentable. In re Best, 562 F.2d 1252, 1254, 195 USPQ 430, 433 (CCPA 1977).

Claims 1, 7- 9, 22 rejected under 35 U.S.C. 102(b) as being anticipated by Elfert et al (US Patent 4217227), herein Elfert.

Elfert discloses a copolyamide films with variety of structures, meeting the limitations of Claim 1 (see Column 6, line 30).

Elfert teaches copolyamide, comprising structures I and IV, whereas both components can be present at the ratio between 10 to 90 mol %, preferably 15 to 50 mol%. (Columns 2 and 3, structures I and IV, Claim 1).

Since the above structure identical to one in the Application's Specification, it inherently meet the requirements on Light transmittance, Young Modulus and thermal shrinkage of Claims 10, 12- 14, 20-22, 36,38-39.

Regarding new limitation of claim 1 claiming Tg of 300C or higher, since Elfert's polymer has the same structure as one claimed, their physical properties are inherently identical.

Art Unit: 1765

The claiming of a new use, new function or unknown property, which is inherently present in the prior art, does not necessarily make the claim patentable. In re Best, 562 F.2d 1252, 1254, 195 USPQ 430, 433 (CCPA 1977).

Claims 1, 10-15, 22, 38-39 rejected under 35 U.S.C. 102(e) as being anticipated by Yamaoka et al (US Publication 2004/0100599), herein Yamaoka.

Yamaoka teaches a method for producing a polyamide, applied as an optical member in LCD displays. Structure 22 and preferred structure 23 meet the limitations of Claims 1, 22.

Since the above structure identical to one in the Application's Specification, it inherently meets the requirements on Light transmittance, Young Modulus and thermal shrinkage of Claims 2,10, 12- 15, 36, 38-39.

Regarding new limitation of claim 1 claiming Tg of 300C or higher, since Yamaoka's polymer has the same structure as one claimed, their physical properties are inherently identical.

The claiming of a new use, new function or unknown property, which is inherently present in the prior art, does not necessarily make the claim patentable. In re Best, 562 F.2d 1252, 1254, 195 USPQ 430, 433 (CCPA 1977).

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 40-46 and new claim 56 rejected under 35 U.S.C. 103(a) as being unpatentable over Harris or Tsukuda or Murakami or Yamaoka or Handa or Teramoto as applied to claims 1,4-5,7-22, 36, 38-39 above, and further in view of Vargo et al (US patent 6232386) herein Vargo.

Harris or Tsukuda or Murakami or Yamaoka or Handa or Teramoto discloses a polyamide film, applied as an optical member in LCD displays (see discussion above).

Harris or Tsukuda or Murakami or Yamaoka or Handa or Teramoto does not disclose the use of his polyamide a part of solar batteries, optical fibers and optical waveguides.

Vargo teaches polymer composites used as an optical element in (Column 15, line 5). He discloses the use of his polymer in non-linear optical devices, which can be considered lens. The above compositions include polyamides.

Therefore, it would have been obvious to a person of ordinary skills in the art to use Harris or Tsukuda or Murakami or Yamaoka's polymer as an optical element in above applications, since their polyamide combine excellent optical properties with high Young modulus, moldability, chemical resistance and durability, thus, meeting the requirements for the above elements of various optical devices.

### ***Response to Arguments***

Applicant's arguments filed on 12/28/2010 have been fully considered but they are not persuasive.

Applicant argues that Handa, Tsukuda 1, Harris, Murakami, Elfert and Yamaoka do not teach Tg value of 300C or higher.

Examiner disagrees. Since the polyamides of the references above identical to the polymer structure of the Application's Specification, it inherently meets the requirements on Light transmittance, Young Modulus and thermal shrinkage of Claims.

Although Applicant admits that Tsukuda and Teraoka disclose a polyamide with Tg of higher than 300C, both publications fail to disclose that polymer with such Tg range provides better mechanical and optical properties.

Examiner disagrees. Both Tsukuda and Teraoka references used in 35 USC 102(b) rejections, where motivation to use such properties is not required.

***Conclusion***

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to GREGORY LISTVOYB whose telephone number is (571)272-6105. The examiner can normally be reached on 10am-7pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, James Seidleck can be reached on (571) 272-1078. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
